Players

Use Play Digital Signage Anywhere

Play supports many digital signage players. Almost any hardware can be used as a digital signage player – the real challenge is finding one that fit your needs. In this page, you'll find some of the player devices that we recommend and sell at Activate The Space .

Amazon Fire Stick 4k

The Amazon Firestick 4K is a very affordable, higher powered, media player that can be easily installed and connected to a wireless network or a direct ethernet connection via an optional adapter. The Amazon Firestick 4K is a good option for 4K video, advanced layouts and webpages, but not recommended for portrait full screen video.

ATS Android 4K

This affordable Android based player is great for running 4k content, running portrait or landscape. It's hard to beat the price point if you're looking for a player with more power. Rest assured this player will run 24X7.

ATS Windows 10 - 4K

ATS Windows 10-4K is a great Windows based media player. If your company already has Windows in place, this player is a great option for all types of signage. Equipped with an Intel Celeron processor, dual display outputs (HDMI or DisplayPort), USB 2.0 and 3.0 and wall plate mount, this ultra-small form factor media player is a solid choice.

Mac Mini i5

Does your company like to use Mac OS?. The Mac Mini i5 runs perfect for most digital signage projects. The Mac Mini has access to all of the Mac OS features that you already know; like restart and sleep timers, security and privacy settings, Timemachine backups and more. Hook up a keyboard and mouse for easy on-site troubleshooting.

Our player is compatible with all major operating systems. No matter what hardware you choose, you'll be able to use our software.
